LPC4330 LCD——DMA刷新

2016年9月5日 11:30

屏幕320*120*16bit=76800 DMA刷新最大一次是4096 所以刷新dma的最大次数是76800/4096=18.75次

DMA链表发送数据

大小端应注意: 貌似大端模式修改了整个dma寄存器的数据读取格式 大端模式下,需软件将(源地址、目的地址、下个链表地址、控制字)4个寄存器的值手动 转成 小端模式(高低字节交换: 0x12345678-->0x78563412)

大小端	源数据宽 度bits	目标数据宽 度bits	结果	疑问	第一步测试:大 端模式寄存器数 据翻转	第一步验 证结果
小端	8	8	成功			
小端	16	8	成功			
大端	8	8	第1个IIi完成, 第二个IIi失败。	因mdk为小端,dma为大端,导致寄存器都是翻转的?下图所示	dsc、src、lli、ct rl寄存器大端转 小端	成功
大端	16	8	第1个IIi完成, 第二个IIi失败	同上	dsc、src、lli、ct rl寄存器大端转 小端	成功

Property	Value			
± SYNC	0			
□ CSRCADDR0	0xB8390010
